

### Abstract of the Disclosure

- An immunogen derived from a protein allergen, characterized  
5 in that said immunogen comprises:
- a. a non-anaphylactic immunogenic recombinant fragment of  
the protein allergen, said fragment containing an IgG  
epitope partly but not wholly overlapping an IgE  
epitope of the protein allergen
  - 10 b. a polymeric form of said fragment, in which form the  
fragment constitutes the monomeric units;
  - c. a recombinant polymeric form of said protein allergen  
in which the protein allergen constitutes the  
monomeric units.
- 15 The use of the immunogen for in vitro diagnoses of type I  
allergy and hyposensitization.
